

Database deployment

1. Modify setting.py according to your environment

```
DATABASES = {  
    'default': {  
        'ENGINE': 'django.db.backends.mysql',  
        'HOST': '', # database host  
        'PORT': , # database port  
        'USER': '', # database user name  
        'PASSWORD': '', # database password  
        'NAME': '', # database name  
        'OPTIONS': {'charset': 'utf8mb4'}  
    }  
}
```

2. Run manage.py to create tables

```
python manage.py makemigrations  
python manage.py migrate
```

3. Import result_school.sql file with Navicat

Right-click and select **Execute SQL File** from the pop-up menu, then select result school.sql
